DETAILED ACTION

Specification

1. The disclosure is objected to because of the following informalities: the application information on page 1, paragraph 1 and page 7, paragraph 4 should be updated.

Appropriate correction is required.

Claim Rejections - 35 USC § 102

2. The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.
3. Claims 1, 2 and 6-8 are rejected under 35 U.S.C. 102(e) as being anticipated by Mirashrafi et al (US006026087A).

Regarding claim 1, Mirashrafi et al. discloses a method comprising determining the QoS (i.e. abstract, fig. 2B, 230, monitors call quality); compare QoS with predetermined threshold (i.e. abstract, fig. 2B, 236, determine if quality is below a predetermined measure); route though the packet network is exceed threshold level and route though the PSTN is theshold not exceeded (i.e. abstract, fig. 1, call is sent through the internet and Bridgeport if QoS acceptable, if not, it is sent directly through the telephone extension 113).

Regarding claim 2, Mirashrafi et al. involve unique service code (i.e. col. 5, ll. 33-35; it is inherent that the Push-to Talk option involve unique codes for the service).

Regarding claims 6-8, Mitashrafi et al. discloses exchanging signaling messages (i.e. col. 6, ll. 27-43; network is internet (i.e. fig. 1, 150); and if not busy connect connect

via the internet with two PSTN on either ends (i.e. fig. 1, 110 and 140 are PSTN/POTS and connected though internet 150).

Claim Rejections - 35 USC § 103

4. The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.

5. Claims 4-5, 9-20 are rejected under 35 U.S.C. 103(a) as being unpatentable over Mirashrafi et al. in view of Farris.

Mirashrafi et al. discloses dialing phone numbers (i.e. equivalent to telephone extensions). Mirashrafi et al. does not specifically disclose AIN, including CPR and ISCP, conditions for triggering ISCP, transmitting packets and measuring round trip time. However, Farris teaches AIN, including CPR and ISCP(i.e. col. 4, ll. 53-56), conditions for triggering ISCP(design choice to operate the ISCP), transmitting packets and measuring round trip time(i.e. col. 15, ll. 28-29). Therefore, it would have been obvious to an ordinary person skilled in the art at the time of the invention to include AIN, including CPR and ISCP, conditions for triggering ISCP, transmitting packets and measuring round trip time as taught by Farris with the method of Mirashrafi et al. in order to improve speed of re-routing calls when conditions improve.

Allowable Subject Matter

6. Claims 21 and 23-24 are allowed.

Response to Arguments

7. Applicant's arguments with respect to claims 1-2 and 4-20 have been considered but are moot in view of the new ground(s) of rejection.
